Bangalore Insights

Using Tableau

PRESENTED BY : DISHA SINDHI

Introduction To Zomato

Zomato is a global restaurant discovery and food delivery platform that connects people with a wide range of dining options. Founded in 2008 by Deepinder Goyal and Pankaj Chaddah in India, Zomato began as a restaurant review and discovery service.

Over time, it has evolved into a comprehensive platform offering services such as food delivery, table reservations, and restaurant management tools.

Introduction To Tableau

Tableau is a leading data visualization and business intelligence tool that helps users transform raw data into actionable insights through interactive and shareable dashboards. It simplifies complex data analysis and enhances decision-making by making data accessible to everyone; from data scientists to business executives.

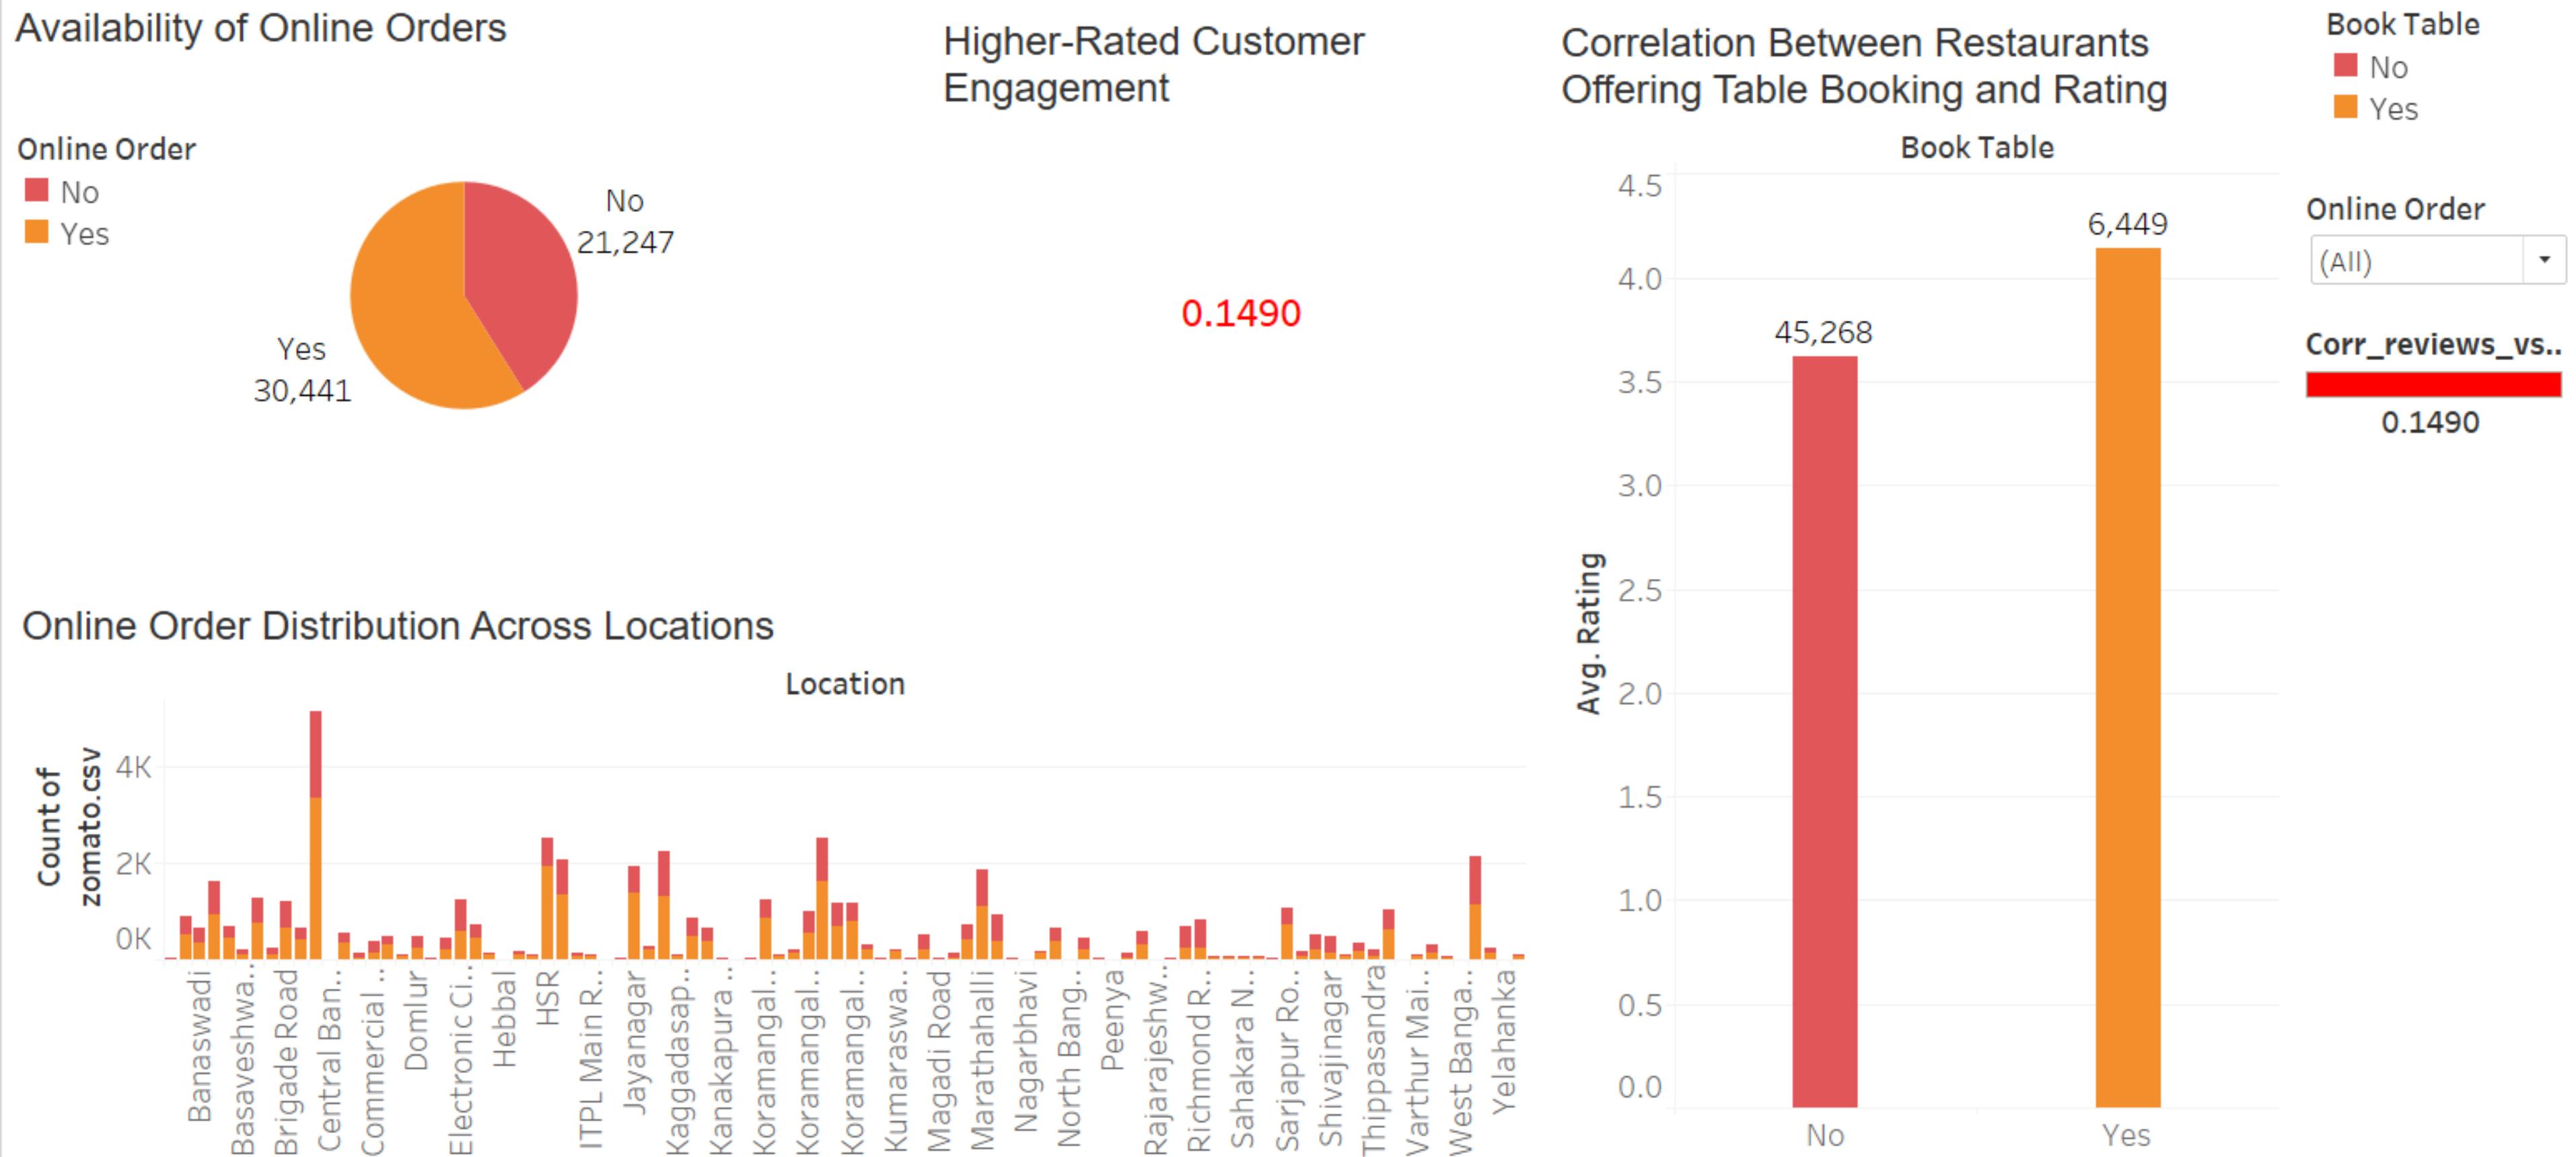

Problem Statement

Zomato needs to identify and optimize critical operational factors (e.g., delivery time, service availability, customer preferences) to improve restaurant popularity, ratings, and customer satisfaction in Bengaluru. Using Tableau dashboards and data analysis, Zomato seeks to provide actionable insights to improve decision-making for both the platform and its partner restaurants.

Types of Restaurant and Ratings

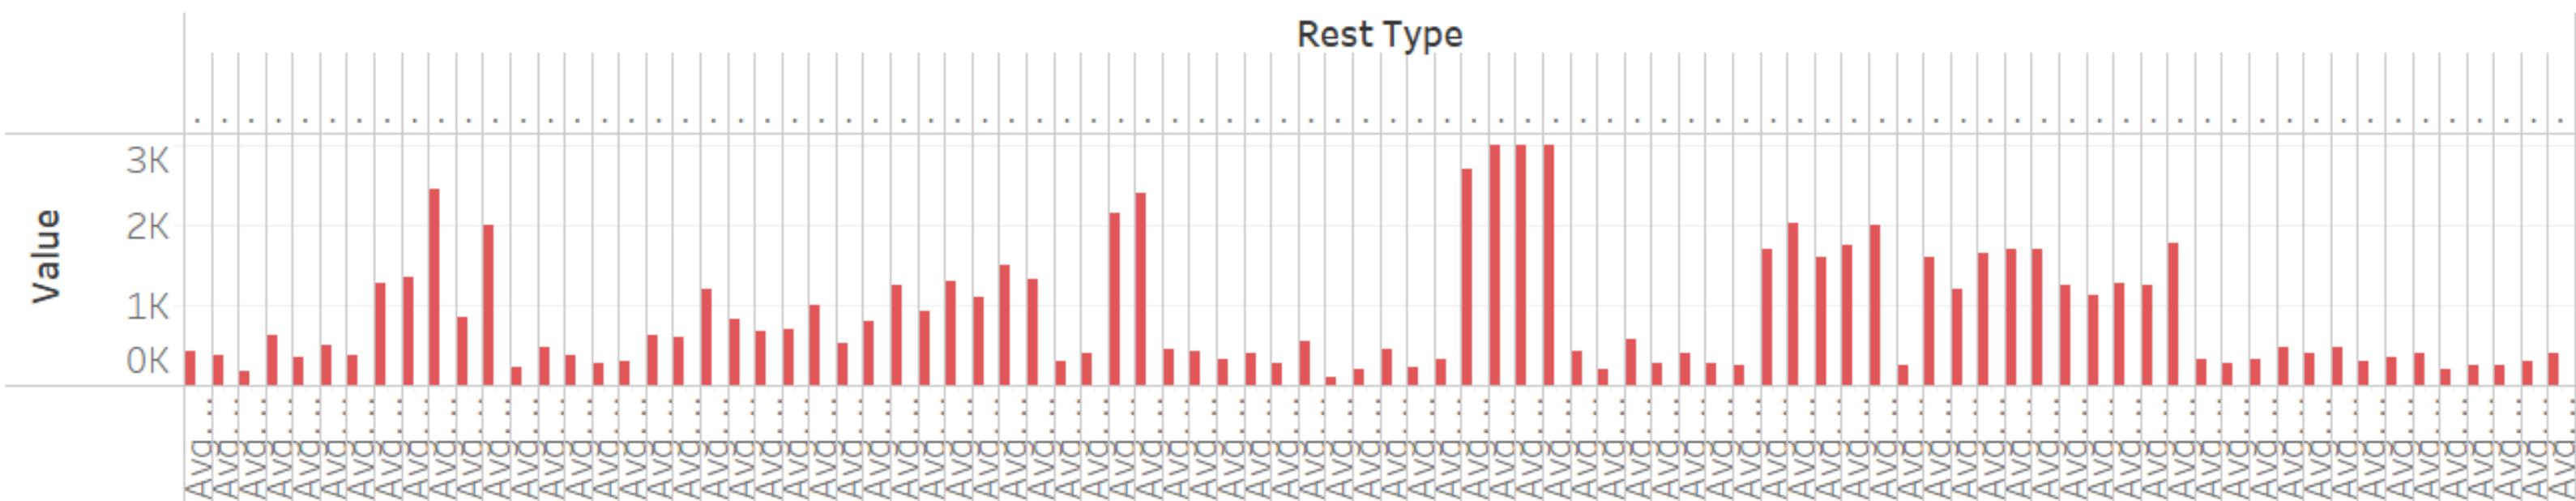

Most Common Restaurant Types

Count of Restaurants By Meal Types

Ratings and Costs Compare

Online Orders and Ratings

1. Availability of Online Orders

- A significant number of restaurants offer online orders (Yes: 30,441) compared to those that don't (No: 21,247).

2. Higher-Rated Customer Engagement

- There is a weak positive correlation (0.1490) between customer reviews and some engagement metrics.

3. Correlation Between Table Booking and Average Rating

- Restaurants offering table booking (Yes) tend to have slightly higher average ratings compared to those that don't (No).
- The number of restaurants not offering table bookings is much higher (45,268) compared to those that do (6,449).

4. Online Order Distribution Across Locations

- Locations like Brigade Road and HSR have a higher count of restaurants offering online orders.
- The distribution shows a variation in online ordering trends across different areas.

Restaurant Analytics Costs and Ratings

1. Highest Average Rated Restaurants

- Neighborhoods like Church Street, Koramangala, and Indiranagar have restaurants with higher average ratings, mostly around 4.0.

2. Average Cost for Two People by Location

- The cost for two people varies significantly by location, with some areas showing higher average costs (e.g., Koramangala and Sadashivanagar).
- The correlation between average cost and rating is moderate (0.3852)

3. Count of Restaurants by Neighborhood

- Areas such as Koramangala, Indiranagar, and Church Street have the highest concentration of restaurants.

4. Concentration of Highly-Rated Restaurants

- Some locations (e.g., BTM and HSR) show a higher density of highly-rated restaurants (ratings above 4.0).

Regional Favorites: Cuisines and Dishes

1. Popular Cuisines by Neighborhood

- Commonly preferred cuisines include Biryani, Bakery, Desserts, Chinese, Fast Food, and North Indian.
- Preferences vary by neighborhood, with some areas favoring Continental, Andhra, or Asian cuisines.

2. Popular Dishes by Location

- Frequently liked dishes include Cocktails, Pizza, French Fries, Butter Chicken, Biryani, Tandoori Chicken, and Pasta.
- Other popular dishes like Parathas, Lassi, and Shawarma highlight diverse culinary preferences.

3. Cuisine Types and Dishes Liked (Filter Options):

- Users can filter the data by specific neighborhoods or dish preferences to focus on more localized insights.

Types of Restaurant and Ratings

1. Most Common Restaurant Types (Tree Map):

- The most frequent restaurant types are Quick Bites (19,132) and Casual Dining (10,330).
- Other popular types include Cafes (3,732), Bars, and Bakeries.

2. Count of Restaurants by Meal Types

- Delivery is the most common meal type, with 25,815 restaurants offering it.
- Dine-out is also significant, with 17,693 options available.
- Smaller segments include Desserts (3,584) and Cafes (1,722).

3. Ratings and Costs Comparison (Bar Chart):

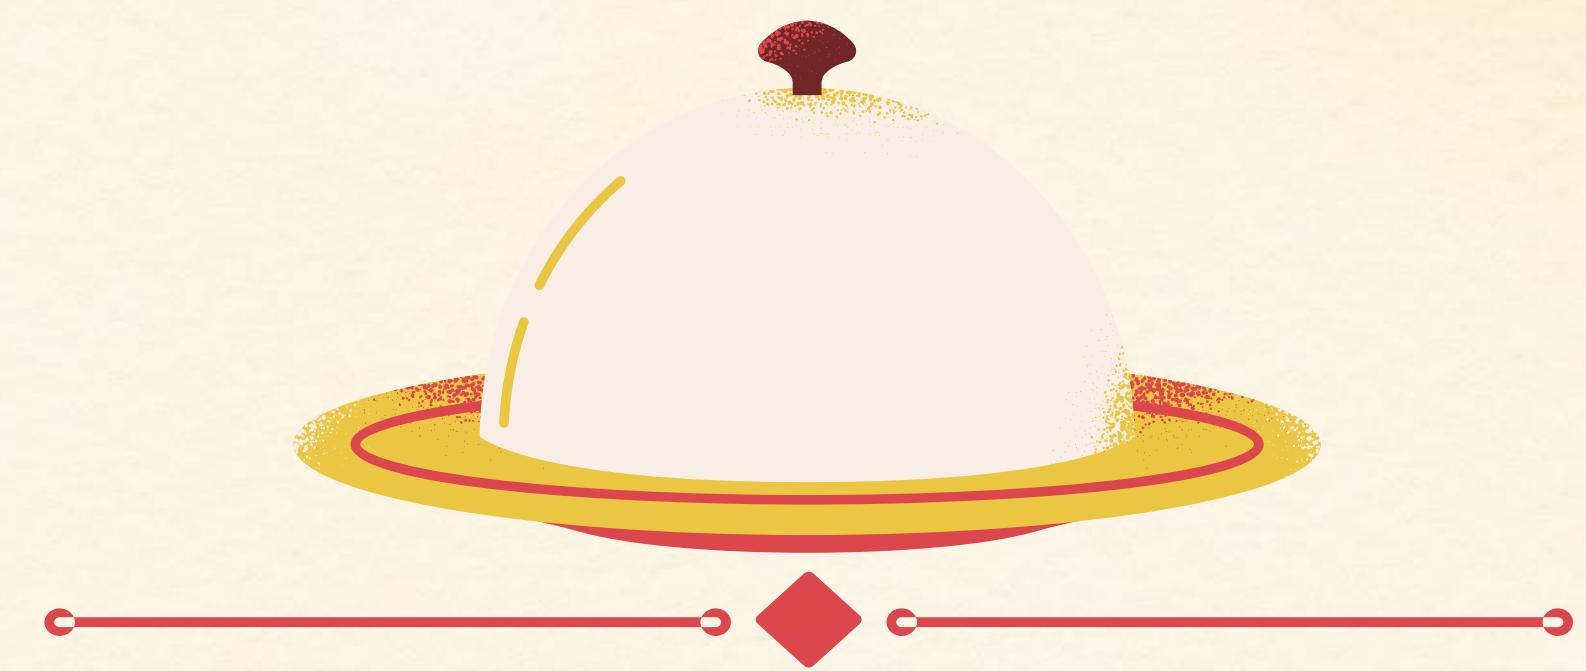

- The chart compares restaurant ratings and average costs for two people across different restaurant types.
- Some restaurant types show higher costs associated with higher ratings, while others do not follow this trend.

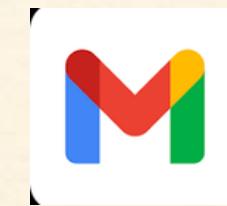

Overall Conclusion

Zomato's strategy in Bengaluru should emphasize:

1. Strengthening delivery and online ordering services in high-demand neighborhoods.
2. Encouraging restaurants to adopt table booking and niche cuisines for a premium experience.
3. Supporting quality improvements in lower-rated areas through targeted initiatives.
4. Leveraging popular cuisines and dishes to increase customer retention.
5. Optimizing pricing strategies based on location demographics and customer preferences.
